State of the Art
Video Surveillance BanKit Solution for
## Banking Operations

Financial institutions are prime targets for criminals across the globe. With an aim to help banks fight and deter sophisticated criminals, VNS team consisting of SME's, IT and financial security experts have developed a specialized BanKIT video surveillance solution. The BanKIT solution also help banks meet the compliance requirements of the authorities having jurisdiction, such as SAMA and Central Banks.

Criminals are continuously discovering new ways to hack into security systems, steal from ATM or commit other financial frauds, therefore it is vital for bank security solutions to be highly reliable but also physically and virtually secure.

Simple, Safe & Secure

VNS offers BanKIT
ranging from ATMs
mobile banking oper

Combining the best in
and smart analytics, usin
to different physical enviro
managers and marketing te
environment for the benefit

Designed for Financial Institutions by
Financial Security Experts

Cyber secure IP communications between end points and across the entire surveillance network.

Power management of surveillance equipment and advance notification of potential equipment faults including IP cameras.

Evidential quality still images and HD video for face detection and facial recognition.

Limitless scalability of video management system and video content analytics.

Deeply integrated video analytics, using common server for VMS to optimize cost.

Video analytics with built in Ai that provides actionable intelligence.

Smart data extracted from surveillance cameras for business intelligence.

Security cockpit to trace VMS and server activities.

Histogram of events and incidents to prevent future incidents.

Scalable hardware and software for future proofing.

Metadata indexing and integration of POS and ATM transaction data.

Automatic report generation based on data from VMS, analytics and external sensors.

With our highly advanced iCat analytic suite combined with sMart Data Warehouse many business intelligence initiatives can be accomplished, based on time & motion study and observing, customer flow, engagement level, peak times, customer counting and other parameters.

Our powerful and robust Observer VMS can be deployed across multiple servers and at the Main Control Center allowing multiple and concurrent user rights as necessary to manage and control thousands of ATMs and branches with limitless cameras. The Observer VMS benefits are second to none in the industry and provide highest value for Banks due to its special banking package and its ability to generate business intelligence data to improve Bank's profitability.

VNS BanKIT is specially developed for financial sector customers and has been proven highly beneficial to our customers including a major European bank.

VNS offers the most advance, robust & best value solution to help financial institutions face branch & retail banking(ATM) security challenges and to comply with regulatory requirements, such as SAMA.
